

VERISIGN® AND CONTENT DELIVERY NETWORKS

VeriSign® SSL Certificates add unique value to your Web presence when you use Content Delivery / Accelerator Networks (commonly known as CDNs) such as Akamai®, Limelight Networks®, L3 Communications™.

The following scenarios describe how our customers typically utilize CDNs. The scenarios also describe where VeriSign SSL Certificates are deployed.

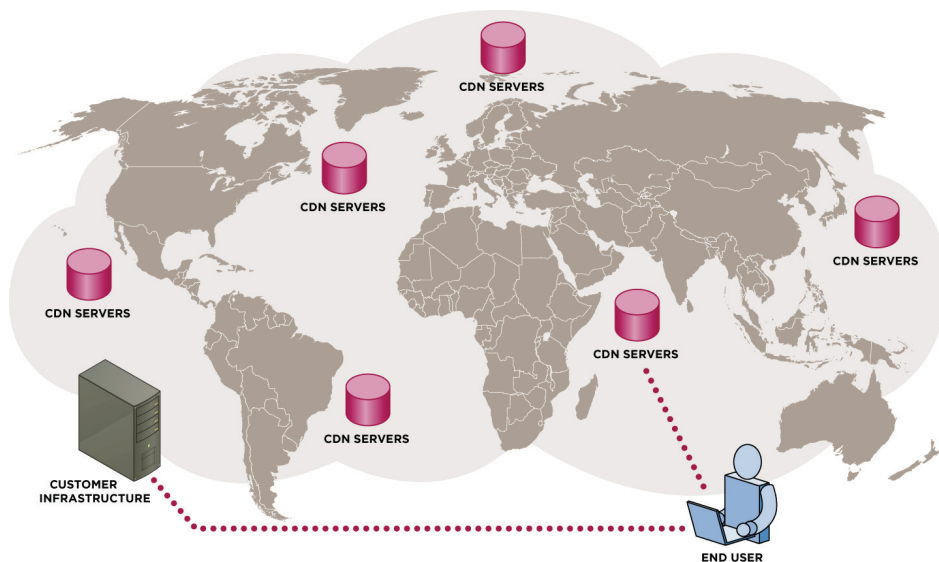

SCENARIO 1: OBJECT DELIVERY (CLASSIC CDN)

CDN delivers static objects (e.g. images) to the end user:

1. Customer infrastructure hosts the Web site and CDN hosts images
2. VeriSign SSL Certificates are installed on customer's servers
3. End user types www.customer.com into a browser
4. Browser retrieves HTML & SSL Certificates from customer's infrastructure
5. HTML instructs browser to get objects from CDN
6. Browser retrieves images from CDN's EdgeServer
7. Customer manages all VeriSign Certificates from a single management interface

KEY BENEFITS

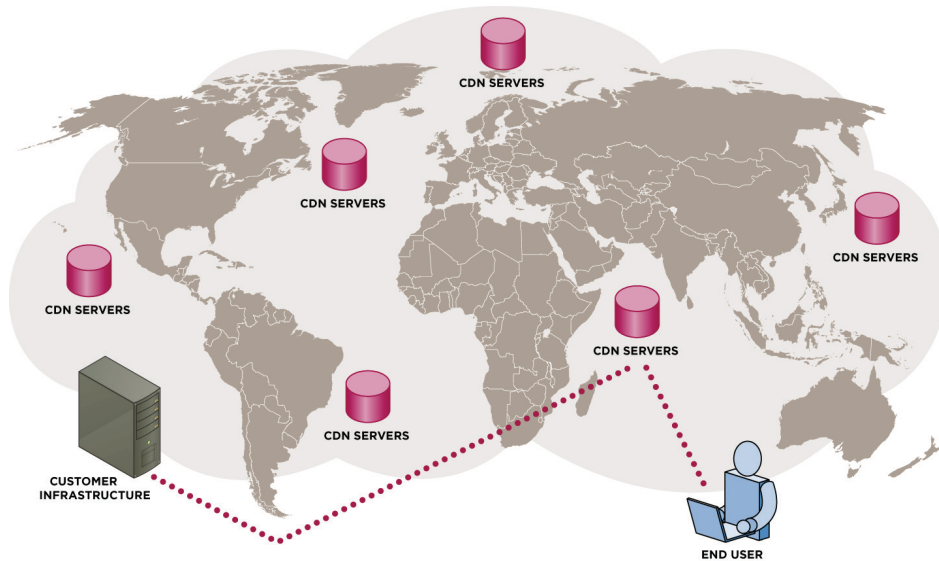

- Increase in online revenue/ transactions—just take a glance at VeriSign customer case studies for proof points.
- Reduction in costs, time and errors by automating management of all types of Certificates (SSL, Code Signing etc.) deployed in your as well as your CDN's infrastructure.
- Gain & retain end user confidence with the Internet's most recognized trust brand.
- Unparalleled infrastructure to support current and future online security needs such as Online Certificate Services Protocol (OCSP).
- VeriSign provides the necessary licensing and support to facilitate efficiency in CDN's internal deployment processes.

SCENARIO 2: WEB SITE DELIVERY

CDN delivers the entire Web site to the end user:

1. CDN infrastructure hosts customer's Web site and images
2. VeriSign SSL Certificates issued to customer are installed on CDN's servers
3. End user types `www.customer.com` into a browser
4. Browser retrieves entire site & SSL Certificates from CDN's infrastructure
5. HTML instructs browser to get objects from CDN's infrastructure
6. Browser retrieves images from CDN's EdgeServer
7. Customer manages VeriSign Certificates from a single management interface

SUMMARY

VeriSign Certificates are perfectly compatible with any CDN infrastructure. Like several of our customers, you can benefit from a true best-of-breed solution set with VeriSign—the Internet's most recognized trust brand.
